

**METHOD AND APPARATUS FOR USING SDRAM TO READ AND WRITE DATA
WITHOUT LATENCY**

ABSTRACT

An apparatus and method are provided for transmitting
5 data using synchronous dynamic random access memory (SDRAM).
In example, the method includes writes data using a first set
of SDRAM banks. Data is written using a second set of SDRAM
banks, wherein the first set of SDRAM banks and the second set
of SDRAM banks write interleaved. Data is read using a third
10 set of SDRAM banks. Data is read using a fourth set of SDRAM
banks, wherein the fourth set of SDRAM banks and the third set
of SDRAM banks read interleaved.
